Stakeholder Goals/Report Objectives

Loan performance summary dashboard to explore potential return on investment, rent analytics and top performing properties based on Net Operating Income. Our stakeholder goals are:

- Executive Leadership: Understand portfolio performance and top-performing assets.
- Asset Management: Compare property performance and affordability.
- Underwriting: Assess cap rate, NOI, NCF, and market sustainability.
- Originations/Portfolio Management: Identify lending opportunities and benchmark markets.

Key Metrics used in the Analysis

Property Cap Rate: Evaluates a property and their income producing potential. Each property is ranked within their state to find those with the highest Cap Rate. This formula uses the Net Operating Income at Underwriting divided by the Appraised Value at loan origination.

Monthly Rent Difference: Based on the Property Location (State), this percentage compares the monthly rent per property against the gross median. This helps gauge where rent is valued against other properties.

Annual Rent Affordability: This percentage represents the amount of income needed to pay rent in each market. For example, lower percentages indicate greater affordability, while higher represents expensive rents, which could cause the owner an income burden. Each property is ranked based on their affordability percentage within their location (Property State).

NOI Per Unit: This represents the Net Operating Income (Underwriting) amount per the number of units within the property. This shows how each unit contributes to the overall profitability of the property. Each property is ranked within their location (Property State) based on their NOI per Unit.

NCF Per Unit: This represents the Net Cash Flow (Underwriting) amount per the number of units within the property. This shows how each unit contributes to the overall profitability and possible revenue of the property. Each property is ranked within their location (Property State) based on their NCF per Unit.

Visuals Used in the Report

Dashboard Visuals:

- **Key Metric Summaries Cards:** Cap Rate, NOI Per Property, Cash Flow Per Unit, Monthly Rent Difference and Annual Rent Affordability Rate.

- **Key Analytic Charts:** Top 3 Properties for Profitability, # Properties Lower/Higer than State Median Rent, and Property Cap Rate & Rent Affordability Scatter Plot:

- The chart “# Properties with Rent Higher/Lower than State Median Rent” can toggle using the grey button on the right to see the number of properties by state above or below.
- The scatter plot is designed to show a four-quadrant analysis of each property, based on Rent Affordability and Cap Rate. Each metric has an average base line, allowing the user to focus on those high or low performing properties. Tooltips are available on each scatterplot to give details of the property.

Dashboard Support Items:

- **Filters** – Filters are included and synchronized within each page, allowing the user to filter values as it carries from page to page. Filters are given for Property State, Property Name, Property Type/Subtype, NOI Per Property and Original Loan Amount. Filters can be activated by clicking on/off the filter icon on the top ribbon:

- **Report Details & Information** – Users can access report dataset details to export by clicking the export icon on top menu, along with using the information button to access report definitions:

Assumptions and Gaps

Assumptions:

- Property source data is accurate and current;
- State-level demographics are representative and correct based on information provided by Walker & Dunlop staff.
- All profitability calculations are based on underwriting or origination metrics to ensure data quality across all properties.

Gaps:

- Historical Trending is not included with this analysis; will need timeseries data or history of each property at an accounting date level to calculation.

Appendix A – Data Dictionary of Enriched Dataset used for Dashboard

Property Characteristics

ID	Business Friendly Name	Description
1	Property Name	Name of the multifamily property or asset.
2	Property State Code	Two-character state abbreviation where the property is located.
3	Property State Name	Full state name associated with the property.
4	State Identifier	Unique state identifier used for demographic mapping.
5	Property ZIP Code	ZIP code associated with the property location.
6	Property Type	Primary real estate asset category.
7	Property Subtype	Secondary classification of the property.

Property Characteristics

ID	Business Friendly Name	Description
8	Total Units	Total number of rentable units within the property.
9	Occupancy Rate (%)	Percentage of units currently occupied.
10	Property Latitude	Geographic latitude coordinate.
11	Property Longitude	Geographic longitude coordinate.
12	Occupancy Rate per State (%)	From demographic data, percentage of occupied housing units against all housing units.
13	Occupancy Rate vs State Indicator	If Occupancy Rate (%) > Occupancy Rate per State (%), field will be "Above", else "Below". Indicator to determine if the property is above or below the state occupancy rate percentage.

Loan Attributes

ID	Business Friendly Name	Description
14	Loan Purpose	Indicates whether the loan was originated for acquisition or refinance purposes.
15	Original Loan Amount	Original principal balance of the loan.
16	Loan Maturity Balance	Outstanding balance at maturity or reporting period.
17	Gross Interest Rate (%)	Contractual loan interest rate.

Valuation Metrics

ID	Business Friendly Name	Description
18	Property Appraised Value	Most recent appraised market value of the property.

Income Metrics

ID	Business Friendly Name	Description
19	Underwriting NOI	Net Operating Income used during underwriting analysis.
20	Underwriting DSCR	Debt Service Coverage Ratio calculated during underwriting.
21	Current NOI	Most recent reported Net Operating Income.
22	Prior Period NOI	Net Operating Income from the prior reporting period.

Rent Metrics

ID	Business Friendly Name	Description
23	Monthly Rent Per Unit	Average monthly rental income generated per unit.
24	Annual Rent Per Unit	Annualized rental income generated per unit.
25	Monthly Interest-Only Debt Service	Monthly interest-only debt service obligation.

Market & Demographic Metrics

ID	Business Friendly Name	Description
26	State Median Monthly Rent	Median monthly gross rent for the state market.
27	State Median Annual Rent	Annualized median gross rent for the state market.
28	Median Household Income	Median household income within the state market.

Derived Metrics

ID	Business Friendly Name	Description
29	Cap Rate (%)	Measures annual NOI relative to property value.
30	State Cap Rate Rank	Property ranking within a state based on Cap Rate.
31	Rent Premium to Market (%)	Percentage difference between property rent and state median rent.
32	Rent Affordability (%)	Percentage of median household income required to pay annual rent.
33	State Affordability Rank	Property ranking within a state based on affordability.
34	NOI Per Unit	Net Operating Income generated per unit.
35	State NOI Per Unit Rank	Ranking of properties within a state based on NOI per unit.
36	Net Cash Flow Per Unit	Net cash flow generated per unit.
